

THREAT WATCH™

REAL-TIME ONLINE RISK ANALYSIS

As part of Strategic Security's Overwatch Security Solutions or as a stand alone service. Strategic's Threat Watch risk analysis benefits organizations by providing quantitative real time data to assess risk levels and subsequent level of security or risk mitigation programs to put in place. Leveraging the latest in data mining, analytics and machine learning security operators, Human Resources and compliance groups can cut through the clutter of on-line chatter to quickly identify corporate threats and insights in real time. This advanced monitoring platform eliminates the false positives of traditional threat intelligence solutions at a fraction of the cost.

Strategic Security delivers a flexible solution to assess risk. Threat Watch provides visibility and insight into both physical and on-line risk across an entire organization. The Threat Watch platform systematically and continually scours: Social Media, dark web, Internet groups as well as news platforms and local law enforcement feeds (local, domestic and national). Incorporating Strategic's proprietary technologies and the U.S. intelligence agency's best practices we are able to identify and quantify potential risks and notify clients of potential threats in real time.

Threat intelligence can now be available at all levels of your organization or be limited to key decision makers. When a threat is detected, it is communicated via alert or integrated into existing platforms for seamless situational awareness that provides the broadest possible discovery and evaluation. Early detection of threats helps protect your most crucial assets.

Most organizations relationship with risk is a reactive one. Many times implementing security measures or mitigation plans after the event. With Strategic Security Corp.'s Threat Watch and analysts, organizations can now be proactive and expansive to mitigate risks before they happen. Strategic Security prides ourselves on our desire to not only address any initial security issues, but flexible enough to leverage our diversity; which allow us to anticipate and prevent possible exposures to risk. Pointing out issues is easy; preventing them is now just as easy. Working with you proactively - will be our mission.
